SUMMARY

Full-Stack engineer who builds developer tools and open-source products end to end, from a React and TypeScript frontend to an Express API, background workers and a PostgreSQL data layer. Experienced with the GitHub API, job queues and Docker-based deployment, with a focus on clear, well-documented and tested code.

SKILLS

Languages: TypeScript, JavaScript, Python, Golang, PostgreSQL

Frontend: React, Next.js, Redux Toolkit, Tailwind CSS, HTML5, CSS3, Framer Motion

Backend: Node.js, NestJS, Express.js, FastAPI, Laravel, REST APIs, WebSockets, Socket.io, BullMQ

Databases: PostgreSQL, MongoDB, Redis, Prisma, SQLAlchemy, Supabase, Firebase, Vector Databases

Cloud & DevOps: AWS (ECS Fargate, Lambda, RDS, S3, CloudFront, Bedrock), Terraform, Docker, Docker Compose, GitHub Actions (CI/CD), Linux VPS, nginx, Vercel, cPanel

PROJECTS

Repositron – Repository Health Dashboard | github.com/zelvarys/repositron-dt
React, TypeScript, Vite, Express, BullMQ, PostgreSQL, Redis, Docker, Vitest

- Dashboard that helps open-source maintainers answer “is this repository healthy, and where should we focus next?” by turning a connected GitHub repository into one clear view.
- Surfaces commit activity and Conventional Commits quality, a bounded repository tree and file-type mix, GitHub Actions success rates and durations, and contributor concentration with bus-factor risk.
- Parses dependency manifests, checks latest versions and OSV advisories, and scores per-tool, per-contributor adoption across 13 detected tools.
- Split into a React/Vite frontend and an Express API with a BullMQ scan worker, shared TypeScript types, SQL migrations, and Vitest unit and integration tests; ships with a multi-stage Dockerfile and Docker Compose.
